PREFACE

In recent years, the agriculture and allied sector in the state has been facing numerous challenges. Although because of a dynamic State Agriculture policy well supported by specific budget for the sector, there has been considerable improvement in Agriculture sector especially in crop production, the sector still struggles because of excessive dependence upon monsoon, weather condition, climate changes, uncertain market situations both for input and agri-produce.

Compilation of data relating to Agriculture, the analysis of same and its proper interpretation has always been a challenging task. The range of data varies from soil, climate, inputs used to productivity and production of crops and their marketing too.

The publication "Odisha Agriculture Statistics 2014-15" is an humble attempt in collection and compilation of data and putting it in right perspective. This publication has been enriched with data collected from co-lateral sources.

In this context, I would like to thank all the officials of Statistics Wing for their sincere and continued effort in making these publications possible. The data provided by allied organizations are duly acknowledged.

Any error if noticed is purely an act of omission and unintentional.

I am sure a wide range of policy makers, academicians, research organization, students as well as agri-business community will find this publication useful.

The appropriate feedback from all quarters is solicited to make future publications more meaningful.

ODISHA AGRICULTURE STATISTICS 2014-15

INTRODUC TION

In an Agricultural country like India, though there has been substantial growth in other sectors, the Agriculture Sector still continues to be the mainstay of livelihood for human civilization. Growth of the agricultural sector is important not only for ensuing food security and reduction of poverty in rural areas, but also sustaining growth of rest of the economy. More so, growth of two non-farm sectors viz. Secondary & Tertiary sectors can be sustained only when the agricultural sector continues to grow and provide adequate demand for goods & services along with market for the farm produce. The aforementioned facts are more true in case of states like Odisha where nearly 60% people earn their livelihood through agriculture and allied activities.

Odisha has a geographical area of 1,55,707 sq.Kms. and is divided into ten agro climatic zones depending upon the soil types, topography, rainfall and cropping pattern. The total cultivated land of the State is 61.80 lakh ha out of which 29.14 lakh ha (47%) is High land 17.55 lakh ha (28%) Medium land and 15.11 lakh ha (25%) low land and about 54% of cultivated land is irrigated. Majority of the farmers are small and marginal and have limited access to resources. Literacy too is a concern for this vulnerable group of farming community. As per Agricultural Census-2010-11 the number of operational holdings of the State is 46.67 lakh with operational area 48.52 lakh ha. The State witnessed a decline in operational area from 50.81 lakh ha in 2000-01 to 48.52 lakh ha in 2010-11 due to urbanization and more of land put to non-agricultural use. Accordingly, the average size of land holding for all social groups in the State too has declined to 1.04 ha.

The “ODISHA AGRICULTURE STATISTICS 2014-15” contains information mainly related to Land Utilisation Statistics, the Estimates of Area, Productivity and Production of different crops and other useful information relating to agriculture like Rainfall, Temperature and Humidity, Irrigation, Use of agro-inputs like seeds, fertilizers, pesticides, Farm Mechanization, Crop Finance, Crop Insurance and also incorporate information on Seed Replacement Ratio (SRR), Minimum Support Price (MSP), Departmental farms, Testing Laboratories etc.

The information furnished in this booklet with regards to area, yield rate and production of Paddy crop has been obtained from the Directorate of Economics and Statistics (DE&S), Odisha, which is based on the sample surveys conducted under EARAS scheme. The estimates of other crops are made on the basis of reports received from the field functionaries of the Directorate of Agriculture & Food Production (DA&FP), Odisha and Directorate of Horticulture (DH), Odisha.

CLIMATE & RAINFALL

The climate of the State is tropical, characterised by high temperature, high humidity, medium to high rainfall, short & mild winter. The normal rainfall is 1451.2 mm. Most of the rainfall received in the state is concentrated over a period of 3 months of the monsoon season.

During 2014, the rainfall varied from excess to deficient. The pre-monsoon rainfall (April'14 & May'14) was excess by 22.1%. On the other hand monsoon rainfall (June'14 to September'14) was deficient by 3.8% whereas post monsoon rainfall (October'14 to December'14) was again excess by 180.2%. The detailed rainfall scenario for the year 2013 is presented below:

Period	Rainfall in mm		% of Deviation

Grand Total	1451.2	1608.7	10.9

CROP CONDITION

The effects of scanty and erratic rainfall on Kharif crops are noted below.

- Heavy weed infestation and poor plant stand of Autumn paddy.
- Late transplanting of medium and late paddy with aged seedlings.
- Drying of grains of medium and late paddy.
- Poor crop stand, reduced growth and tillering of late varieties of paddy.

The condition of non-paddy and Rabi crops were by and large normal.

There was an enhancement of 14% in overall distribution of seeds over previous year.

FERTILISER

The use of chemical fertilizers substantially improves the productivity and production of crops. Due importance is being given on balanced use of fertilizers in line with the Integrated Nutrient Management (INM) principles, which not only enhances production but also maintains the fertility of the soil. While there was an increase in Kharif fertiliser consumption (12.3%) the Rabi consumption declined by 28.4% due to less supply of canal water and also the Phailin and Flash flood that inhibited farmers to go for intensive cropping. The details of nutrient consumption made during 2014-15 are given in the table.

Type of Nutrient	Consumption in '000MT.		
	Kharif	Rabi	Total
N	216.787	97.281	314.068

Consumption Kgs./hect.	58.45	59.95	58.91

The N: P: K use ratio was 5.30: 2.13: 1

PESTICIDES

Crops grown under various agro-climatic situation are affected by a large number of pests and diseases. Most often chemical control are being resorted to protect the crops to avoid crop losses. The details of pesticides consumption during 2014-15 are as follows:

(Quantity ai in MT)

Sl. No	Type of pesticides	Consumption of pesticides

Besides adopting situation specific need based Chemical control measures, Government is also promoting IPM techniques, Seed Treatment campaigns, e-pest surveillance etc.

FARM MECHANISATION

Farm mechanization is inevitable in modern crop husbandry. This not only ensures timely agricultural operations but also helps reduce drudgery of labour & cost of cultivation. Massive efforts have been put in for popularization of different improved farm equipments and machineries among farmers through conducting demonstrations and extending subsidy. The achievement made in this regard during 2014-15 is presented below:

Item	Unit	Achievement
Tractor	Nos	2875
Power tiller	Nos	14388
Self-propelled Reaper	Nos	360
Self-propelled Transplanter	Nos	521

Pump sets	Nos	29992
Combined Harvester	Nos	264
Farm Power Consumption	KW/ha	1.48

CREATION OF CAPTIVE IRRIGATION

Assured supply of water is one of the pre-requisites for successful crop production. Accordingly, our State Govt. provides subsidy to the cultivators for creation of captive irrigation under the Agriculture Policy and Jananidhi scheme. The achievement made under the scheme during 2014-15 is as follows.

(Unit in Nos)

Name of the captive irrigation under RIDF During 2014-15

Shallow Tube well	2473
Bore well	5983
Surface lift	1
Dug well	1098
Total:	9555

AGRICULTURE CREDIT

During 2014-15 annual credit plan of Rs. 22975.36 Crore had been chalked out for financing Agriculture & allied sector. Against the said plan, Rs 15028.23 Crore was disbursed. Wide inter district variation was noticed in agriculture financing ranging from 28 to 111%. The District wise figure is given at *Page-34*.

CROP INSURANCE

Rashtriya Krishi Bima Yajana (RKBY) was introduced in the State from Rabi 1999-2000. Both Loanee & Non-loanee farmers have been covered under this scheme. It is compulsory for loanee farmers and optional for non-loanee farmers.

The crops covered under this scheme during Kharif'14 were Paddy, Maize, Groundnut, Jute, Niger, Arhar and Cotton. Similarly, during Rabi 2014-15 season crops like Paddy, Groundnut, Mustard & Potato were covered under the programme

The achievement made under above crop insurance schemes for the year 2014-15 is given below:

Item	Kharif	Rabi	Total
Area Covered ('000hect.)	1566.756	118.469	1685.225
Farmers covered (Nos in lakh)	18.01	1.18	19.19
Farmers benefited (Nos in lakh)	1.76	0.11	1.87
Sum Insured (Rs in crores)	5228.95	480.38	5709.33
Premium collected (Rs. in crores)	133.73	9.75	143.48
Compensation paid (Rs. in crores)	255.35	7.97	263.32

POWER CONSUMPTION

The trend of power consumption for agricultural purpose and its share in total power consumption since 2000-01 is indicated below. While there is an overall increase in power consumption in the agriculture sector, the share of agriculture sector to total power consumed in the State declined consistently. The main reason ascribed for this decline is growing use of power in the other competing sector and the lack of dedicated electric feeder ensuring consistent power supply for agricultural purpose especially to mega lift points.

MINIMUM SUPPORT PRICE

The Minimum Support Price (MSP) of various agricultural commodities is fixed by Government of India based on the recommendation of the Commission for Agricultural Costs and Prices (CACP) with an objective to protect the interest of the farmers in the event of price fall in the market because of over production and lack of proper access to the market.. The MSP fixed for Common and Grade-A Paddy during the year 2014-15 were ₹1360 and ₹1400 per quintal respectively.

SEED REPLACEMENT RATE

The Seed Replacement Rate (SRR) of different crops for 2014-15 is indicated below:

Name of the crop	Seed Rate Kg./ha.	SRR in % for 2014-15		
		Kharif	Rabi	Total
Paddy	60	29.73	54.88	31.55
Ragi	10	0.45	0.12	0.44
Maize	15	37.23	7.36	35.16
Wheat	125		6.96	6.96
Moong	20	1.78	6.60	5.36
Urd	20	3.78	0.58	2.07
Gram	50		4.80	4.80
Arhar	20	6.71		6.71
Field pea	50		3.42	3.42
Groundnut	150	16.55	10.39	12.39
Mustard	10		19.48	19.48
Sesamum	10	0.01	0.02	0.01
Niger	10	0.48		0.48
Sunflower	5		23.74	23.18
Jute	10	34.72		34.72
Cotton	2	71.55		71.55

While the SRR for paddy is almost at par with the national level, the same for other non-paddy crops (except Jute, Cotton, Maize) are much behind national level. The major concern in this area is poor level of SRR in pulses. The main reasons for low SRR in case of non-Paddy crops are non-availability of suitable location specific varieties and tendency of farmers to raise the crop under improper management practices.
