## PREFACE

The agriculture and allied sector in the state has always been facing numerous challenges. The sector still struggles because of excessive dependence upon monsoon, a pertinent weather condition, climate changes and uncertain market situations both for input and agri-produce. However apt policy interventions well supported by specific budget for the sector helped the sector to overcome such odds and grow at a better place.

The challenge lies not only in compilation of various information but also its proper analysis to generate more meaningful interpretation. Compilation of data relating to Agriculture, the analysis of same and its proper interpretation has always been a challenging task. The range of data varies from weather, inputs used to productivity and production of crops and their marketing too.

The publication "Odisha Agriculture Statistics 2015-16" is a humble attempt in collection and compilation of data and putting it in right perspective. This publication has been enriched with data collected from co-lateral sources.

Although a matter of routine, but the sheer perseverance of officials of statistics wing to compile wide range of information collected from various sources and came up with the publication in spite of limited manpower is really a praise winning. The data provided by allied organizations are duly acknowledged.

Any error if noticed is purely an act of omission and unintentional.

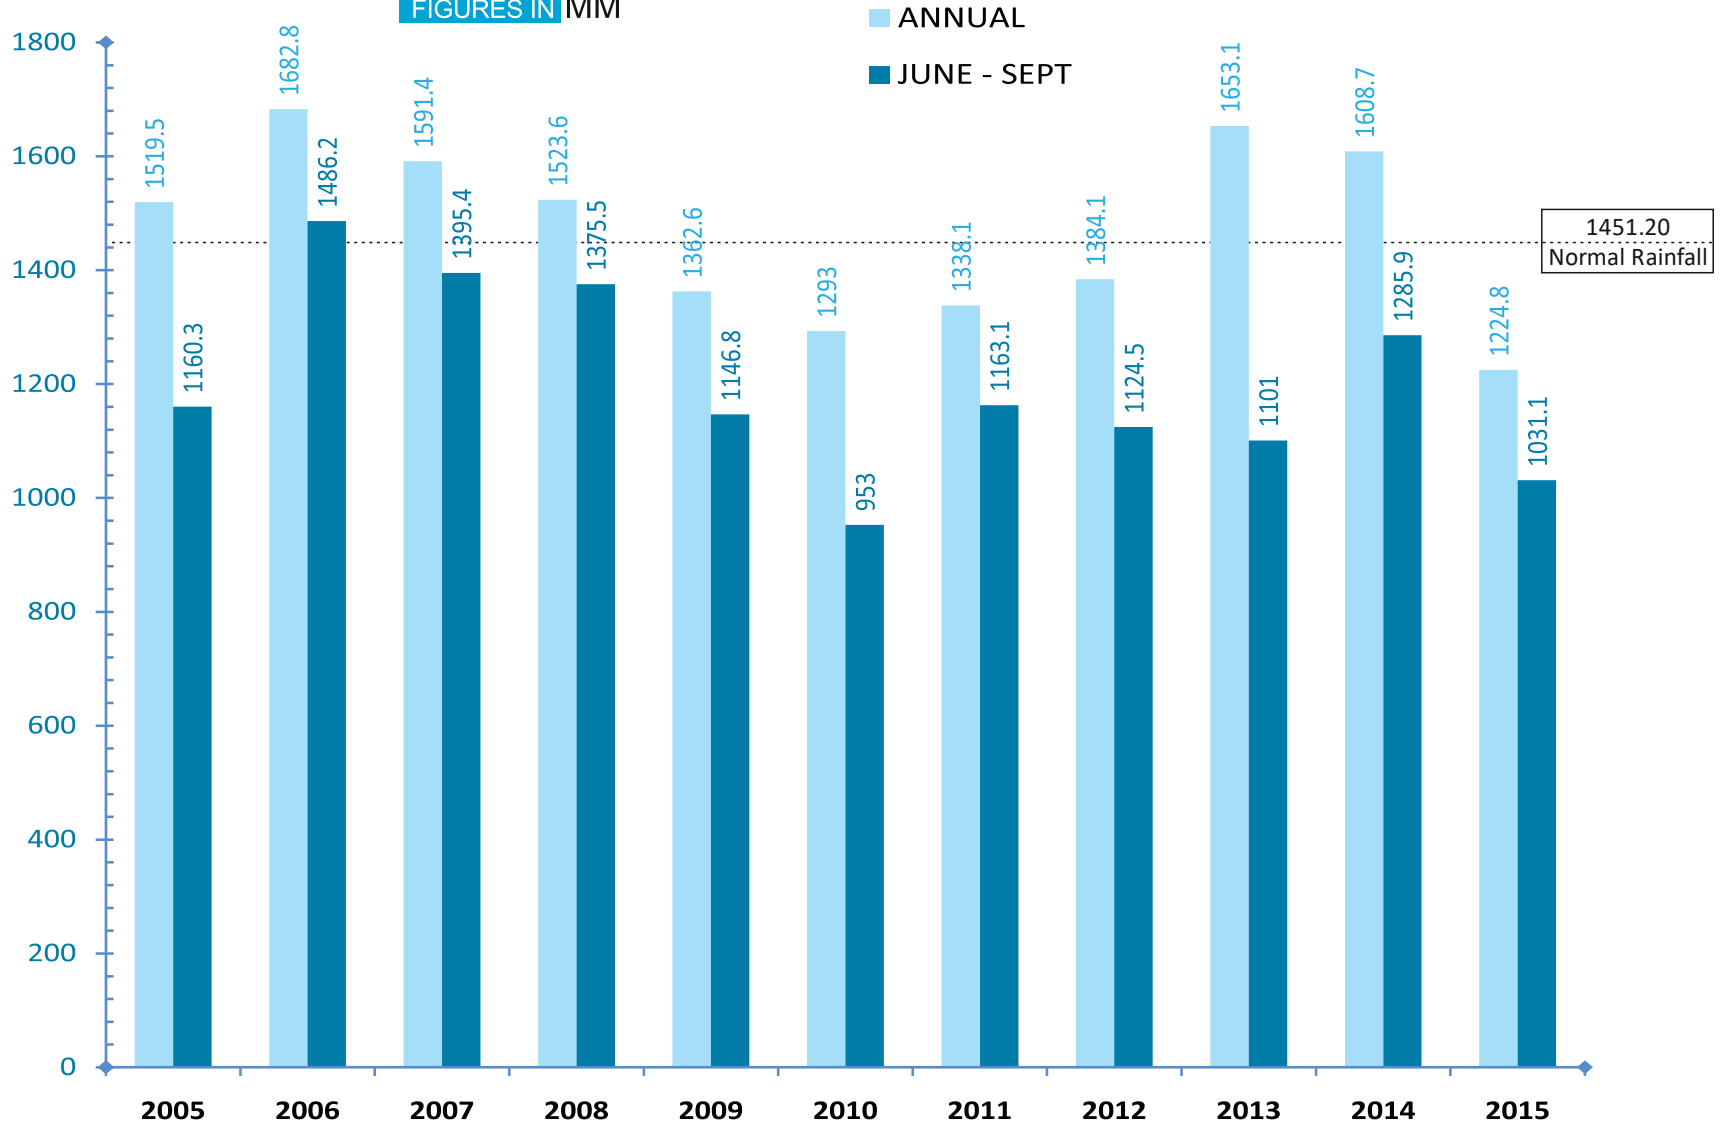

I hope this publication will be useful to the policy maker, academician research organization, students and stakeholder, appropriate feedback from all quarters is solicited to make future publications more meaningful.

# ODISHA AGRICULTURE STATISTICS 2015-16

## INTRODUCTION

Over the years Agriculture in the state has moved from the level of subsistence farming to the status of semi-commercial farming. This has not only helped the State to become self-sufficient in production of staple crop like Paddy but also reduction of poverty in rural areas and ensuring the food security. Although the contribution of agriculture sector to GDP has exhibited a declined trend in recent years, nevertheless growth of two non-farm sectors viz., Secondary & Tertiary sectors can only be sustained only when the agricultural sector continues to grow and provide adequate demand for goods & services along with market for the farm produce. The aforementioned facts are more true in case of states like Odisha where nearly 60% people earn their livelihood through agriculture and allied activities.

Odisha has a geographical area of 1,55,707 sq.Kms. and is divided into ten agro climatic zones depending upon the soil types, topography, rainfall and cropping pattern. The total cultivated land of the State is 61.80 lakh ha out of which 29.14 lakh ha (47%) is High land 17.55 lakh ha (28%) Medium land and 15.11 lakh ha (25%) low land and about 36.47 lakh ha of cultivated land is irrigated. Majority of the farmers are small and marginal and have limited access to resources. Literacy too is a concern for this vulnerable group of farming community. As per Agricultural Census-2015-16 the number of operational holdings of the State is 48.66 lakh with operational area 46.19 lakh ha. The State witnessed a decline in operational area from 50.81 lakh ha in 2000-01 to 48.52 lakh ha in 2010-11 and 46.19 lakh ha in 2015-16 due to urbanization and more of land put to non-agricultural use. Accordingly, the average size of land holding for all social groups in the State too has declined to 1.04 ha.

The "ODISHA AGRICULTURE STATISTICS 2015-16" contains information mainly related to Land Utilization Statistics, Estimates of Area, Productivity and Production of different crops and other useful information relating to agriculture like Rainfall, Temperature and Humidity, Irrigation, Use of agro-inputs like seeds, fertilizers, pesticides, Farm Mechanization, Crop Finance, Crop Insurance and also incorporate information on Minimum Support Price (MSP), Departmental farms, Normal yield rate of paddy, Testing Laboratories etc.

The information furnished in this booklet with regards to area, yield rate and production of Paddy crop has been obtained from the Directorate of Economics and Statistics (DE&S), Odisha, which is based on the sample surveys conducted under EARAS scheme. The estimates of other crops are made on the basis of reports received from the field functionaries of the Directorate of Agriculture & Food Production (DA&FP), Odisha and Directorate of Horticulture (DH), Odisha.

## CLIMATE & RAINFALL

The climate of the State is tropical, characterized by high temperature, high humidity, and medium to high rainfall, short & mild winter. The normal rainfall is 1451.2 mm. Most of the rainfall received in the state is concentrated over a period of 3 months of the monsoon season.

During 2015, the rainfall varied from excess to deficient. The pre-monsoon rainfall (April'15 & May'15) was excess by 19.3%. On the other hand monsoon rainfall (June'15 to September'15) was deficient by 9.9% and the post monsoon rainfall (October'15 to December'15) was again deficient by 68.5%. The detailed rainfall scenario for the year 2015 is presented below.

## CROP COVERAGE

The net area sown and gross cropped area during the year 2015-16 were **56.08** lakh ha and **83.85** lakh ha respectively. The cropping intensity for the said period was 150%. The Net Area sown(NAS) increased by 2% whereas the Gross Cropped Area(GCA) declined by 7%. Rice continues to be the major crop in Kharif season, so are pulses & oilseeds in Rabi season. The coverage under different crops grown during the year 2015-16 is as follows.

## CROP CONDITION

Because of the deficit rainfall during main crop growing period, the crop production was badly affected mainly due to following reasons.

- Heavy weed infestation and poor plant stand of Autumn paddy.
- Late transplanting of medium and late duration paddy with aged seedlings.
- Poor crop stand, reduced growth and tillering of late varieties of paddy.

The resultant effect was low yield of most of Kharif crops especially paddy. The condition of non-paddy and Rabi crops were by and large normal.

## CROP PRODUCTION

The details of crop category wise irrigated area are presented below

While the total irrigated area increased by 6.0% over previous the year, the utilization of irrigation potential also improved by 4.6 %.

## CREATION OF CAPTIVE IRRIGATION

Assured supply of water is one of the pre-requisites for successful crop production. Accordingly, State Govt. provides subsidy to the cultivators for creation of captive irrigation under the Agriculture Policy and Jananidhi scheme. The achievement made under the scheme during 2015-16 is as follows.

*(Unit in Nos)*

### Name of the captive irrigation under RIDF During 2015-16

## SEEDS

Use of quality seed plays a vital role in boosting the production. The strategy has been to maximize quality seed distribution & improve Seed Replacement Ratio (SRR). The details of seed distribution made through departmental sale centers during 2015-16 are as follows:

There was an enhancement of 7.64% in overall distribution of seeds over previous year.

## SEED REPLACEMENT RATE

The Seed Replacement Rate (SRR) of different crops for 2015-16 is indicated below.

Name of the crop	Seed Rate Kg./ha.	SRR in % for 2015-16		
		Kharif	Rabi	Total
Paddy	60	36.22	32.65	36.01
Ragi	10	0.19	0.53	0.20

Sunflower	5	-	29.82	29.82
Jute	10	29.59	-	29.59
Cotton	2	52.72	-	52.72

While the SRR for paddy is almost at par with the recommended level, the same for other non-paddy crops (except Jute, Cotton, Maize) are much behind national level. The major concern in this area is poor level of SRR in pulses. The main reasons for low SRR in case of non-Paddy crops are non-availability of suitable location specific varieties and tendency of farmers to raise the crop under improper management practices.

## FERTILISER

Appropriate use of chemical fertilizers substantially improves the productivity and production of crops. Due importance is being given on balanced use of fertilizers in line with the principle Integrated Nutrient Management (INM) which not only enhances production but also

Type of Nutrient	Consumption in '000MT.		
	Kharif	Rabi	Total
N	254.708	72.487	327.195
P	90.902	42.759	133.661

maintains the fertility of the soil. While there was an increase in Kharif fertiliser consumption ( 11.89 %) the Rabi consumption declined by ( 12.97 %) due to less supply of canal water and also the Phailin and Flash flood that inhibited farmers to go for intensive cropping. The details of nutrient consumption made during 2015-16 are given below.

## PESTICIDES

Crops grown under various agro-climatic situations were affected by multiple pests and diseases. Most often chemical control are being resorted to protect the crops to avoid crop losses. The details of pesticides consumption during 2015-16 are as follows

*(Quantity ai in MT)*

SI. No	Type of pesticides	Consumption of pesticides		
		Kharif'2015	Rabi'2015-16	Total
1	Insecticides	395	191	586

<b>Total</b>		<b>752</b>	<b>342</b>	<b>1094</b>
<b>Per ha consumption in gms a.i.</b>				<b>115</b>

Besides adopting situation specific need based Chemical control measures, Government is also promoting IPM techniques, Seed Treatment campaigns, e-pest surveillance etc.

## FARM MECHANISATION

Farm mechanization is inevitable in modern crop husbandry. This not only ensures timely agricultural operations but also helps reduce drudgery of labour & cost of cultivation. Massive efforts have been put in for popularization of different improved farm equipments and machineries among farmers through conducting demonstrations and extending subsidy. The achievement made in this regard during 2015-16 is presented below.

## POWER CONSUMPTION

The trend of power consumption for agricultural purpose and its share in total power consumption since 2000-01 is indicated below. While there is an overall increase in power consumption in the agriculture sector, the share of agriculture sector to total power consumed in the State did not improve much.. The main reason ascribed for this is growing use of power in the other competing sector and the lack of dedicated electric feeder ensuring consistent power supply for agricultural purpose especially to mega lift points.

## MINIMUM SUPPORT PRICE

The Minimum Support Price (MSP) of various agricultural commodities is fixed by Government of India based on the recommendation of the Commission for Agricultural Costs and Prices (CACP) with an objective to protect the interest of the farmers in the event of price fall in the market because of over production and lack of proper access to the market.. The MSP fixed for Common and Grade-A Paddy during the year 2015-16 were ₹1410 and ₹1450 per quintal respectively.

## AGRICULTURE CREDIT

During 2015-16 annual credit plan of Rs10000 Crore had been chalked out for financing Agriculture & allied sector. Against the said plan, Rs 9569.77 Crore was disbursed. Wide inter district variation was noticed in agriculture financing ranging from 75 to 111%. The District wise figure is given in page No-38.

## CROP INSURANCE

Rashtriya Krishi Bima Yajana (RKBY) was introduced in the State from Rabi 1999-2000. Both Loanee & Non-loanee farmers have been covered under this scheme. It is compulsory for loanee farmers and optional for non-loanee farmers.

The crops covered under this scheme during Kharif'15 were Paddy, Maize, Groundnut, Jute, Niger, Arhar and Cotton. Similarly, during Rabi 2015-16 season crops like Paddy, Groundnut, Mustard & Potato were covered under the programme

The achievement made under above crop insurance schemes for the year 2015-16 is given below.
